Journal of Sports Sciences 1988, **6**, 273–275

Subject index

Adults, validity, reliability, $\dot{V}O_2$ max, field test, 93

Aerodynamics, throwing technique, optimization, javelin, computer simulation, modelling, 1

Anthropometric measurements, athletes and non-athletes, rugby, hurling, body composition, 131

Anthropometry, female athletes, body fat, training, body composition, gymnastics, 205

Athletes and non-athletes, rugby, hurling, body composition, anthropometric measurements, 131

Bayesian decision making model, psychological crisis, time phases, 141

Bicycle ergometer, regression analysis, psychophysics, category-ratio scaling, perceived exertion, maximal work capacity, 189

Biomechanics, water polo, throwing, 103

Body composition, anthropometric measurements, athletes and non-athletes, rugby, hurling, 131

Body composition, gymnastics, anthropometry, female athletes, body fat, training, 205

Body fat, training, body composition, gymnastics, anthropometry, female athletes, 205

Category-ratio scaling, perceived exertion, maximal work capacity, bicycle ergometer, regression analysis, psychophysics, 189

Children, adults, validity, reliability, $\dot{V}O_2$ max, field test, 93

Children, skeletal age, echocardiography, ventricular size, growth, training, 49

Choice reaction time, movement time, cognitive anxiety, somatic anxiety, 59

Cognitive anxiety, somatic anxiety, choice reaction time, movement time, 59

Competitive anxiety, neoroendocrine activity, heart rate, visuomotor ability, muscular ability, 115

Computer simulation, modelling, aerodynamics, throwing technique, optimization, javelin, 1

Cycling, muscle activity, Lombard's paradox, kinesiological EMG, 229

Echocardiography, ventricular size, growth, training, children, skeletal age, 49

Exercise testing, HR Kinetics, half-time, HR break point, ventilatory threshold, 39

Female athletes, body fat, training, body composition, gymnastics, anthropometry, 205

Field test, children, adults, validity, reliability, $\dot{V}O_2$ max, 93

Growth, training, children, skeletal age, echocardiography, ventricular size, 49

Gymnastics, anthropometry, female athletes, body fat, training, body composition, 205

Half-time, HR break point, ventilatory threshold, exercise testing, HR Kinetics, 39

Heart rate, visuomotor ability, muscular power, competitive anxiety, neuroendocrine activity, 115

HR break point, ventilatory threshold, exercise testing, HR Kinetics, half-time, 39

HR Kinetics, half-time, HR break point, ventilatory threshold, exercise testing, 39

Hurling, body composition, anthropometric, measurements, athletes and non-athletes, rugby, 131

Interstitial oedema, maximal exercise, lung diffusing capacity, transthoracic electrical oedema, 219
Javelin, computer simulation, modelling, aerodynamics, throwing technique, optimization, 1
Kinesiological EMG, cycling, muscle activity, Lombard's paradox, 229
Lombard's paradox, kinesiological EMG, cycling, muscle activity, 229
Lung diffusing capacity, transthoracic electrical impedence, interstitial oedema, maximal exercise, 219
Maximal exercise, lung diffusing capacity, transthoracic electrical impedence, interstitial oedema, 219
Maximal work capacity, bicycle ergometer, regression analysis, psychophysics, category-ratio scaling, perceived exertion, 189
Modelling, aerodynamics, throwing technique, optimization, javelin, computer simulation, 1
Movement time, cognitive anxiety, somatic anxiety, choice reaction time, 59
Muscle activity, Lombard's Paradox, kinesiological EMG, cycling, 229
Muscular power, competitive anxiety, neuroendocrine activity, heart rate, visuomotor ability, 115
Neuroendocrine activity, heart rate, visuomotor ability, muscular power, competitive anxiety, 115
Optimization, javelin, computer simulation, modelling, aerodynamics, throwing technique, 1
Perceived exertion, maximal work capacity, bicycle ergometer, regression analysis, psychophysics, category-ratio scaling, 189
Psychological crisis, time phases, Bayesian decision making model, 141
Psychophysics, category-ratio scaling, perceived exertion, maximal work capacity, bicycle ergometer, regression analysis, 189
Reliability, $\dot{V}O_2$ max, field test, children, adults, validity, 93
Regression analysis, psychophysics, category-ratio scaling, perceived exertion, maximal work capacity, bicycle ergometer, 189
Rugby, hurling, body composition, anthropometric measurements, athletes and non-athletes, 131
Skeletal age, echocardiography, ventricular size, growth, training, children, 49
Somatic anxiety, choice reaction time, movement time, cognitive anxiety, 59
Throwing, biomechanics, water polo, 103
Throwing technique, optimization, javelin, computer simulation, modelling, aerodynamics, 1
Time phases, Bayesian decision making model, psychological crisis, 141
Training, body composition, gymnastics, anthropometry, female athletes, body fat, 205
Training, children, skeletal age, echocardiography, ventricular size, growth, 49
Transthoracic electrical impedance, interstitial oedema, maximal exercise, lung diffusing capacity, 219
Validity, reliability, $\dot{V}0_2$ max, field test, children, adults, 93
Ventilatory threshold, exercise testing, HR kinetics, half-time, HR break point, 39
Ventricular size, growth training, children, skeletal age, echocardiography, 49
Visuomotor ability, muscular power, competitive anxiety, neuroendocrine activity, heart rate, 115
$\dot{V}O_2$, field test, children, adults, validity, reliability, 93
Water polo, throwing, biomechanics, 103
